

FDA Firsts

In the case of the products created for the professional aesthetic market, there are several “firsts” as cleared by the United States Food and Drug Administration (FDA) on September 11, 2009:

- 1.) First ultrasound therapy device for use in aesthetic applications
- 2.) First ultrasound treatment device containing ultrasound imaging
- 3.) First energy based aesthetic device with “lifting” as its designated indication for use
- 4.) First compact, broad use of ultrasound treatment not specifically designed or limited to hospital use. (No MRI machine needed or general/local anesthesia.
- 5.) First device in its class, which has resulted in a new technology category for the FDA
